

0.25 Ton Capacity Chain Block

This chain block is a lifting device designed for vertical lifting applications. It features a robust chain mechanism for smooth and reliable operation with hooks at both ends for secure attachment.

Product Overview

Reliable Lifting Solution

This 0.25-ton capacity chain block is engineered for efficient and safe vertical lifting in demanding industrial environments. Designed with a robust chain mechanism, it ensures smooth operation for a variety of lifting tasks in workshops and construction sites. The unit comes equipped with secure hooks at both ends, facilitating reliable attachment to both the load and the overhead lifting point.

Technical Specifications

Load Capacity

0.25 ton
Capacity

Key Features

- Robust chain mechanism
- Dual hook system
- Vertical lifting design
- Smooth operation

Operation Type

Manual Chain Block

Suitable Environments

Workshop, Construction Site, Industrial
