

0.5 HP Automatic Electric Water Pump

This 0.5 HP electric water pump is designed for automatic operation. It is suitable for boosting water pressure, supplying water to homes, and other general water transfer applications.

ADDITIONAL IMAGES

Product Overview

Compact and durable water pumping solution designed for efficient fluid transfer.

Professional Water Boosting Solution

The PS150B is a high-efficiency 0.5HP automatic electric water pump engineered for reliable residential and light commercial water supply. Its robust cast iron construction and brass impeller ensure long-term durability in various fluid transfer applications. Equipped with an integrated pressure control system and thermal overload protection, it provides consistent pressure and safe, automated operation for the end-user.

Technical Specifications

Performance Overview

0.4 HP

Power Output

2.3 A

Rated Current

28 M

Max Suction

Performance Curve (Head vs Flow)

Flow (l/min)	Head (m)
0	28
10	18.5
15	13.5
20	9
25	4

Features

Operating Conditions

- Rotational speed: 2850 r/min
- Residential and light commercial use
- Integrated pressure control system

Key Attributes

Automatic Start/Stop, Thermal Overload Protection, Cast Iron Body, Brass Impeller, Single Phase Motor
