# Hydraulic System Components with Cuboid Heads

These hydraulic components are designed for machinery and industrial applications within hydraulic systems. Each component features a cuboid-shaped head mounted atop a rectangular column, with different interfaces.

## Product Overview

### High-Performance Hydraulic Components

These hydraulic system components feature distinctive cuboid head designs, engineered for precision and reliability in industrial machinery. Each unit is constructed with a robust rectangular column base, ensuring stability during operation. The set includes varied interface configurations, making them versatile solutions for complex hydraulic systems requiring specific functional connections.

## Technical Specifications

| | |
|---|---|
| **Design Features** | Cuboid Head, Rectangular Column, Industrial Grade |
| **Finish** | Orange |
| **Application** | Hydraulic Machinery |
| **Set Composition** | 3 units |
