

10-Ton Luffing Jib Tower Crane

This luffing jib tower crane is designed for construction sites. It features a luffing jib, enabling precise load placement in congested areas and a maximum lifting capacity of 10 tons.

Overview

High-Performance Luffing Jib Tower Crane

The 10-Ton Luffing Jib Tower Crane is a specialized lifting solution engineered for demanding construction environments. Featuring a luffing jib mechanism, this crane offers superior maneuverability and precise load placement, making it exceptionally well-suited for congested urban job sites. With a robust 10-ton maximum lifting capacity, it provides the stability and height required to efficiently handle heavy building materials for tall structure projects.

Technical Specifications

Maximum Lifting Capacity	10 tons
Crane Type	Luffing Jib Tower Crane
Model Designation	STL203C-10t

Key Features

Performance Benefits

- Luffing jib for precise load placement
- Enhanced maneuverability in tight spaces
- High stability for vertical construction
- Optimized for heavy-duty lifting

Best For	Urban Construction, Congested Sites, Tall Buildings, Heavy Material Handling
