

10000 m3 Oxygen Generating Station

This is a 10,000 m3 oxygen generating station. It provides a continuous supply of oxygen for various applications within industrial plants.

Product Overview

Industrial Oxygen Generating Station

This high-capacity oxygen generating station is engineered for large-scale industrial applications, providing a reliable and continuous supply of high-purity oxygen. Designed to support heavy-duty manufacturing environments such as steel production, the system integrates robust compression technology with efficient separation processes. It is a critical infrastructure component for facilities requiring significant oxygen volume to maintain optimal operational efficiency.

Technical Metrics

Production Capacity

10000 m3

Oxygen Output

Equipment Category

Compressors • Industrial Gas Systems

Application

Primary Industry Application

Steel Manufacturing
