

10000 T/D Cement Production Line Project

This project is a 10000 tons per day cement production line. The facility is located in the United Arab Emirates and includes raw material storage, grinding equipment, kiln systems, and cement grinding lines.

Project Overview

Industrial Cement Facility Profile

This large-scale industrial cement production facility is engineered for high-capacity output in the UAE. The project encompasses a comprehensive scope including mechanical and electrical installation, structural steel systems, and advanced kiln integration. It stands as a testament to complex industrial engineering, incorporating critical infrastructure from raw material storage to final packaging.

Operational Capacity

Daily Output Capacity

10000 T/D

Cement Production

Scope of Work

Included Installation Services

Mechanical Equipment, Electrical Systems, Steel Structures, Furnace Construction, Pipeline Systems, Commissioning

Facility Systems

Facility Infrastructure Components

- Raw Material Storage
- Grinding and Mixing Equipment
- Kiln Systems for Clinker Production
- Cement Packaging Lines
- Fire Control Systems
- Communication Infrastructure
- Elevator Systems
