Overview

Professional 1000L Micro Brewery System

This 1000L micro brewery equipment is designed for high-efficiency craft beer production, offering a comprehensive solution for small-scale breweries and brewpubs. The system features modular components including milling, saccharification, fermentation, and refrigeration, all built with high-quality SUS304 stainless steel or traditional red copper. Engineered for precision and reliability, this setup ensures consistent brewing results and efficient temperature control throughout the entire fermentation cycle.

Technical Specifications

Capacity

1000 L

Working Capacity

Included Systems

- Milling system
- Saccharification system
- Fermentation system
- Refrigeration system
- Washing and sterilization system
- Control system

Construction Materials

SUS304 Stainless Steel, Red Copper

Logistics

Place of Origin

Shandong, China

Delivery Lead Time

35 days

Packaging Options

Wooden case or other standard protective packaging
