

10A Single Pole Plate Switch

This single-pole, single-throw (SPST) plate switch is rated for 10 amps. It is suitable for controlling lighting circuits and other low-power electrical loads.

Overview

Reliable 10A Control Solution

This 10A single pole plate switch is engineered for general-purpose electrical applications, providing a dependable solution for controlling lighting circuits and low-power loads. Its flush-mount design ensures seamless integration into modern wall plates while offering a clean, professional aesthetic. Constructed from durable materials, this switch is built for long-lasting performance and safe operation in diverse environments.
