

10KV Overhead Insulated Cable for Power Transmission

These 10KV overhead insulated cables are designed for power transmission and distribution. The cables feature a durable insulation layer that provides protection against environmental factors and electrical hazards.

Product Overview

High-Performance Overhead Power Transmission

These 10KV overhead insulated cables are engineered specifically for reliable power transmission and distribution in overhead line networks. Featuring a robust insulation layer, they provide essential protection against harsh environmental factors and potential electrical hazards. The design supports both copper and aluminum conductor options to ensure optimal conductivity and performance across various infrastructure applications.

Technical Specifications

Key Protection Features

Insulated • Environmental Protection • Electrical Hazard Resistant

Voltage Rating	10 KV
Conductor Options	Copper, Aluminum
Primary Application	Overhead power lines
