

10L Oxygen-Free Copper Heat Exchange Tank

This oxygen-free 10L copper tank features a robust construction with multiple horizontal copper tubes for efficient heat exchange. Designed for household electrical appliance applications, this tank ensures reliable performance and durability.

Product Overview

High-Efficiency Thermal Solution

This 10L oxygen-free copper heat exchange tank is engineered for superior thermal conductivity and durability in household electrical appliance applications. Constructed from 99.9% oxygen-free copper, the unit features a robust design with integrated piping for reliable heat exchange performance. Its hard oxidation treatment ensures long-term resilience, making it an ideal component for demanding heating systems.

Physical Specifications

Capacity	10 L
Product Weight	2.2 KGS

Material & Build

Material Composition

99.9% Oxygen-free Copper

Key Features

High Efficiency, Hard Oxidation, Excellent Thermal Conductivity, Super Durability

Performance
