

10L Oxygen-Free Copper Heat Exchanger

This oxygen-free copper heat exchanger has a 10-liter capacity and is designed for household electrical appliances. It features brazed joints and integrated mounting brackets for durability and easy installation.

Overview

High-Efficiency Thermal Solution

This 10-liter oxygen-free copper heat exchanger is engineered for superior thermal conductivity and long-term durability in household electrical appliances. Constructed from 99.9% pure oxygen-free copper, it features a robust hard oxidation finish and a multi-pass design with brazed joints. Designed for reliability, the unit includes integrated mounting brackets and standard threaded connections to ensure straightforward installation and maintenance.

Technical Specifications

Material Purity	99.9% Oxygen-free Copper
Product Weight	1.76 KGS
Capacity	10 L

Key Features

Core Advantages

- High Efficiency
- Hard Oxidation Finish
- Excellent Thermal Conductivity
- Super Durability
- Multi-pass Design
