

111kWp Rooftop Solar Energy System

This 111kWp solar energy system is designed for rooftop installation. Completed in September 2008, the system utilizes high-density photovoltaic arrays for efficient solar energy generation.

System Overview

Industrial Solar Power Solution

This 111kWp rooftop solar energy system provides a robust renewable energy solution for commercial and industrial facilities. Featuring high-density photovoltaic technology, the system is engineered for maximum surface area coverage and optimized energy conversion efficiency. Its durable and weather-resistant construction ensures reliable performance in demanding environments, making it an ideal investment for large-scale energy independence.

Power Capacity

111 kWp

Installed Capacity

Technical Specifications

Target Applications

- Commercial Buildings
- Industrial Facilities
- Large-scale rooftop mounting

Installation Type

Flat Rooftop

Key Features

High-density PV, Weather-resistant, Commercial Grade, Optimized Efficiency
