

12-Way IR Return Distribution Amplifier

This distribution amplifier is designed to distribute satellite or cable signals to multiple locations while allowing for infrared (IR) remote control signals to be sent back to the source. It features multiple output ports, allowing connection to up to 12 devices.

Product Overview

Professional Signal Distribution

The 12-Way IR Return Distribution Amplifier is engineered to efficiently distribute satellite or cable signals to up to 12 individual locations. Designed to maintain signal integrity and strength, it features integrated infrared (IR) return functionality, allowing users to control source equipment remotely from any connected room. This versatile solution is perfect for professional-grade entertainment setups in both residential and commercial environments.

Technical Specifications

System Capabilities

- Signal distribution to 12 locations
- Integrated IR return remote control support
- High signal strength and quality maintenance
- Residential and commercial compatibility

Output Capacity	12 Ports
Supported Signals	Satellite, Cable
