

1200L Pharmaceutical Refrigerator for Medicine and Vaccine Storage

The medicine refrigerator is specific cold-storage equipment. It can also be used for storing reagents, vaccines, and biological products, especially in hospitals, pharmacies, pharmaceutical factories, and blood banks.

ADDITIONAL IMAGES

Overview

Professional Cold Storage Solution

This 1200-liter pharmaceutical refrigerator is engineered for the precise storage of temperature-sensitive items, including vaccines, biological products, and reagents. Designed for high-stakes environments like hospitals, blood banks, and laboratories, it features a forced-air circulation system to ensure uniform internal temperature. With advanced monitoring, multi-layer security, and robust backup power capabilities, it provides a reliable, compliant solution for professional cold-chain management.

Capacity & Design

Total Capacity	1200 L
Suitable Environments	Hospitals, Pharmacies, Laboratories, Blood Banks, Epidemic Stations

Temperature Control

Temperature Range

2 °C Minimum	8 °C Maximum
------------------------	------------------------

Control Precision	0.1 °C
Display Resolution	0.1 °C

Safety & Monitoring

Alarm System Types

- High/Low Temperature
- Sensor Failure
- Door Opening
- Electricity Failure
- Low Back-up Battery
- Low Voltage

Security Features

Keyboard Lock • Password Protection • Remote Alarm Interface

Backup Battery Duration

72 hours

Technical Specifications

Cooling Technology

Forced cold-air circulation with intelligent-control fan

Refrigerant Status

Fluoride-free (Environmental Friendly)

Data Connectivity

RS-232 Interface for PC communication
