

12V 150Ah Lead-Acid Battery for Solar/Wind Systems

This 12V 150Ah lead-acid battery is designed for energy storage applications in solar and wind power systems. It provides reliable power and extended lifespan for renewable energy setups.

Overview

Professional Grade Energy Storage

This 12V 150Ah lead-acid battery is engineered specifically for reliable energy storage in renewable energy systems, including solar and wind power installations. Designed for durability and performance, it provides a stable power supply for demanding off-grid applications. The unit is built to meet international safety and quality standards, ensuring consistency for professional deployments.

Technical Specifications

Core Performance

12 V Nominal Voltage	150 Ah Rated Capacity	41 kg Weight
--------------------------------	---------------------------------	------------------------

Dimensions

Dimension	Value
Length	483 mm
Width	170 mm
Height	248 mm

Certifications & Compliance

Regulatory Standards	ISO9001, ISO4001, CE
----------------------	----------------------

Operational Safety

Safety Instructions

- Read instructions thoroughly before use
- Avoid short-circuiting battery terminals
- Do not charge in airless or confined conditions
- Do not attempt to resolve or remould the battery
- Maintain optimal temperature near 25°C for maximum lifespan
