

12V Diesel Engine Fuel Filter

This 12V diesel engine fuel filter is engineered for use in freight vehicles. It is designed to be compatible with Euro IV and above engines.

Product Overview

High-Performance Diesel Filtration

This 12V diesel engine fuel filter is engineered to ensure optimal fuel cleanliness for heavy-duty applications. Designed specifically for modern engines meeting Euro IV and higher emission standards, it provides reliable protection against contaminants. Regular maintenance with this filter helps prevent engine damage and ensures consistent operational efficiency for freight vehicles.

Technical Specifications

Voltage	12 V
Compatible Engine Standards	Euro IV, Euro V, Euro VI

Maintenance

Replacement Interval (Distance)

12000 km
Max Distance

Replacement Interval (Time)

250 hours
Max Hours

Maintenance Instructions

- Lubricate the new element seal with clean engine oil before installation
- Always check for fuel leaks immediately after starting the engine
- Refer to the provided diagram for correct installation procedure
- Improper maintenance or fuel leakage can lead to engine damage
