

12V Lead-Acid Battery for Automotive and Industrial Use

This 12V lead-acid battery is designed for automotive and industrial applications. It features a robust construction with reinforced polypropylene casing for vibration resistance and extended service life.

Product Overview

Reliable 12V Lead-Acid Power Solution

This 12V lead-acid battery is engineered for both automotive and industrial applications, offering robust performance and durability. Featuring a reinforced polypropylene casing, it provides excellent vibration resistance and an extended service life. Designed with low-resistance internal connections, it ensures enhanced power output and superior cold cranking performance for reliable starting and deep cycling.

Technical Specifications

Maintenance Type

Maintenance-accessible

Voltage

12 V

Model Number

6-QA-105

Construction & Design

Key Design Features

- Vibration resistant construction
- Low-resistance internal connections
- Electrolyte level accessibility

Casing Material

Reinforced Polypropylene

Performance Metrics

Performance Capabilities

Automotive, Industrial, Cold Cranking, Deep Cycling
