

140 Series Gas Engine for Compressors

The 140 Series gas engine provides a reliable power source for compressor applications in oil drilling operations. It features advanced combustion technology for reduced emissions and a modular design for easy maintenance.

Product Overview

140 Series Gas Engine for Compressors

The 140 Series gas engine is a robust and reliable power source engineered specifically for compressor applications in demanding oil drilling operations. It features advanced combustion technology designed to reduce emissions while maintaining high performance and efficiency. With a modular design that facilitates easier maintenance and comprehensive monitoring systems, this engine provides a cost-effective, long-term solution for continuous industrial power requirements.

Technical Specifications

Performance Highlights

4444 kW

Rated Power Output

873 N·m

Operational Torque

Primary Application

Oil Drilling Compressor Power

Industry Compliance

Industrial Grade, Low Emission, Continuous Operation

Maintenance and Design

Design Advantages

- Modular construction for ease of maintenance
- Robust build for harsh industrial environments
- Integrated monitoring and control systems
- Optimized fuel consumption
