

1450HC 6-Roll Reversible Cold Rolling Mill

The 1450HC 6-roll reversible cold rolling mill is engineered for precision, efficiency, and versatility in metal production. Its robust design and advanced control systems ensure consistent quality and optimal performance.

Overview

High-Performance Cold Rolling Solution

The 1450HC 6-roll single-stand reversible cold-roll line is a high-performance metal processing system engineered for precision and efficiency. Featuring a 6-roll configuration, it provides enhanced gauge control and superior surface finish for various metal products. The reversible functionality allows for multiple passes without re-handling material, significantly increasing overall productivity.

Technical Specifications

Roll Configuration	6-roll single-stand
Operation Type	Reversible
Key Features	Enhanced Gauge Control, Superior Surface Finish, Reversible Processing, High Productivity
