

1.5 CBM Mobile Self-Loading Concrete Mixer

This mobile concrete mixer features a compact design for easy installation and transportation. The vehicle efficiently combines a mixer, loader, and carrier into one convenient construction solution.

Overview

Compact Multi-Function Mixer

This mobile self-loading concrete mixer integrates mixing, loading, and carrying capabilities into a single, highly efficient unit. Its compact design is specifically engineered for maneuverability, making it an ideal solution for construction sites with limited space, including urban development, tunnels, airports, seaports, and high-speed rail projects. Built with high-strength steel and advanced mixing blade geometry, this machine ensures rapid output and superior mixing performance for professional construction needs.

Technical Specifications

Professional shipping preparation ensures all mechanical components arrive in optimal condition.

Model	QLFQ1.5
Rotary Drum Capacity	1.5 m3
Actual Stirring Capacity	1.3 m3
Braking Method	Oil Brake

Design & Construction

Key Features

- Integrated loading, mixing, and carrying
- Varying pitch mixing blade design
- Simplified feeding device
- Compact footprint for limited sites

Material Composition

High-strength steel plate, 16Mn forging, Normalized steel
