

150cc Air-Cooled Single-Cylinder Motorcycle Engine

This single-cylinder, four-stroke engine has a displacement of approximately 150cc and is air-cooled. It is known for its reliability and ease of maintenance, making it a popular choice for urban transportation.

Product Overview

Reliable 150cc Powerplant

The JL157QMJ-2 is a robust single-cylinder, four-stroke engine engineered for scooters and small motorcycles. Known for its reliability and ease of maintenance, this unit is an ideal choice for urban transportation applications. It combines efficient fuel consumption with a compact, lightweight design to ensure excellent maneuverability in city environments.

Technical Specifications

Displacement	150 cc
Cooling System	Air-cooled
Engine Configuration	Single-cylinder, Four-stroke

Performance & Systems

Key Benefits

- Efficient fuel consumption
- Compact design
- Lightweight construction
- Easy maintenance

Fuel System	Carburetor
Ignition	CDI
Transmission	CVT
