Product Overview

High-Performance Silver Oxide Power

These 1.55V Silver Oxide button cells are engineered to provide a stable and reliable voltage power source for precision electronics. Designed with a mercury-free (0% Hg) composition, they offer an environmentally conscious choice without compromising on performance. Our specialized 'Half Silver' formula provides an eco-friendly option suitable for a wide range of sensitive applications.

Technical Specifications

Mercury Content

0% Hg

Nominal Voltage

1.55 V

Chemistry

Silver Oxide

Applications

Typical Applications

- Analogue Watches
- Precision Instruments
- Calculators
- Medical Devices

Product Options

Available Models

SR44, SR626W
