

1.6L 4-Cylinder Engine Cylinder Head

Aluminum cylinder head designed for 1.6L engines. It is precision-engineered with coolant passages and mounting points for various engine components.

Product Overview

Precision-Engineered Cylinder Head

This 1.6L 4-cylinder engine cylinder head is designed to ensure efficient combustion and optimal performance. Precision-engineered with integrated coolant passages and mounting points, it serves as a critical component for sealing the combustion chamber and managing airflow. This unit is built to meet the rigorous demands of automotive engine maintenance and repair.

Technical Specifications

Primary Function

- Combustion chamber sealing
- Airflow direction
- Engine component mounting

Engine Displacement	1.6 L
Cylinder Count	4
Material	Aluminum
Key Features	Intake Ports, Exhaust Ports, Coolant Passages, Precision Engineered
