

20-120T Mast Crane for Truss Installation

This crane can be directly installed on trusses of varying heights using universal members. It is suitable for use as a fixing crane and wharf crane.

Product Overview

Versatile Heavy-Lifting Solution

The 20-120T Mast Crane is a highly adaptable lifting solution engineered for complex construction and industrial environments. Designed for flexibility, this crane can be directly installed on trusses of varying heights, making it suitable for specialized infrastructure projects. Its robust construction allows it to serve multiple roles, including as a fixed crane or a wharf crane, providing reliable performance for heavy-duty lifting requirements.

Technical Specifications

Available Lifting Capacities

- 20
- 25
- 35
- 80
- 120

Primary Applications

Truss Installation, Fixed Crane Operation, Wharf Crane Operation, Construction Engineering

Installation Compatibility

Compatible with trusses of different heights spliced by universal members
