

200 Amp Portable TIG Welding Machine

This is a compact and portable argon welding machine designed for TIG welding applications. It features a digital display for precise current control and adjustable settings for optimal welding performance.

Product Overview

Professional Performance in a Portable Design

The 200 Amp Portable TIG Welding Machine utilizes advanced MOSFET technology to deliver a high duty cycle for demanding welding tasks. Designed for precision and reliability, it is highly effective for welding all kinds of stainless steel. With its compact form factor and intuitive digital controls, this unit is an excellent choice for both on-site professional projects and workshop applications.

Technical Specifications

Current Range

20 A

Minimum Current

200 A

Maximum Current

Technology Type

MOSFET

Compatible Materials

Stainless Steel

Interface

Digital Display
