

200 KVA Natural Gas Generator Set

This 200 KVA natural gas generator set is designed for power generation. The unit features a gas engine coupled with an alternator and a control panel for monitoring operation.

Overview

The generator unit features a professional-grade engine adapted for natural gas fuel, optimized for reliable industrial power supply.

High-Efficiency Natural Gas Power Solution

This 200 KVA generator set utilizes natural gas as a clean-burning fuel, offering a reliable and environmentally friendly alternative to traditional diesel or gasoline systems. Designed for high efficiency, the unit is ideal for Combined Heat and Power (CHP) applications, enabling the simultaneous production of electricity and thermal energy. Its modular design ensures ease of relocation and maintenance, making it an excellent choice for distributed energy systems requiring stable, independent power supply.

Technical Features

Key Advantages

- Lower exhaust emissions for reduced air pollution
- High calorific value suitable for CHP systems
- High energy efficiency through thermal recovery
- Portable design for flexible deployment
- Reduced grid reliance

Engine and Alternator Compatibility

Natural Gas Fuel, High Horsepower Architecture, Flexible Alternator Options
