

2000 Series Diesel Engine for Drilling Rigs

The 2000 Series diesel engines provide a nominal power range of 180-1,000 kW and a nominal speed range of 100-1,500 r/min. These engines are widely used in various countries and regions as the main power source for mechanical drilling rigs.

Overview

2000 Series Industrial Power

The 2000 Series diesel engines are engineered specifically as the primary power source for mechanical drilling rigs. Recognized with the National Gold Prize Medal, these engines are a standard in the industry, powering ninety percent of drilling rigs in China. Their robust design and reliable performance have led to widespread adoption across over 20 countries and regions globally.
