

200W Digital Servo Drive

This digital servo drive is designed for industrial automation and motion control applications. It operates on a 220V power supply and has a 200W power rating.

Product Overview

High-Performance Digital Servo Drive

This 200W digital servo drive is engineered for precision industrial automation and motion control applications. It features a robust design optimized for reliable integration into complex control systems. With standardized interface ports, it provides efficient connectivity for high-performance motion requirements.

Technical Specifications

Interface Ports

- CN1
- CN2
- CN3

Rated Power	200 W
Operating Voltage	220 V

Compliance and Standards

Operational Safety

Warning Label Included • Caution Label Included

Certifications	CE
