

# 210 MW Thermal Power Generation Unit

This is a 210 MW thermal power unit used in power plants. It converts thermal energy into electrical power using a turbine generator set.

## Product Overview

### 210 MW Thermal Power Generation Unit

This high-capacity thermal power generation unit is engineered for reliable electricity production. Designed as a robust turbine-generator set, it converts thermal energy into electrical power with high efficiency. The unit features integrated auxiliary systems and is mounted on a stable foundation, ensuring consistent performance for large-scale power plant operations.

## Technical Specifications

### Rated Power Output

**210 MW**  
Capacity

Equipment Type	Thermal Power Generation Unit (Turbine-Generator Set)
Primary Application	Power Generation, Thermal Energy Conversion, Industrial Power
