

# 220KV Substation Capacitor System

This capacitor system is designed for installation in 220KV substations. The system improves power factor and voltage stability within electrical grids.

## Product Overview

### High-Voltage Capacitor System

This high-voltage capacitor system is engineered for deployment in 220KV substation environments, specifically designed to enhance electrical grid performance. It focuses on critical infrastructure requirements such as power factor correction and voltage stability. The system is built to withstand demanding operational conditions, ensuring reliability and adherence to rigorous international engineering standards.

## Technical Specifications

Rated Voltage	220 KV
Primary Application	Substation Infrastructure
Key Functions	Power Factor Correction, Voltage Stability, Grid Support

## Deployment Locations

### Project Sites

- Laokay
- Viet Tri
- Vinh Yen
