

230-250W Polycrystalline Solar Panel for Grid-Tied Systems

This high-efficiency polycrystalline solar panel is designed for foreign engineering contracting. It offers a reliable power output ranging from 230W to 250W, making it suitable for various solar energy applications.

Overview

High-Efficiency Polycrystalline Module

This polycrystalline solar panel is engineered to deliver reliable power output ranging from 230W to 250W, making it an excellent choice for diverse solar energy applications. Designed with durability and long-term performance in mind, it utilizes advanced manufacturing techniques to withstand challenging environmental factors. It is specifically optimized for large-scale solar projects and grid-tied system installations.

Technical Specifications

Power Output Range

230 W

Minimum Power

250 W

Maximum Power

Cell Technology

Polycrystalline

Application Suitability

Grid-Tied Systems, Large-Scale Projects, Engineering Contracting

Quality & Standards

Key Features

- High-efficiency output
- Durable material construction
- Resistant to environmental factors
- Advanced manufacturing
