

24-Hour Programmable Timer Switch

This programmable timer switch automates electrical devices using a 24-hour cycle. Users can set on/off times with the rotating dial and manual override switch.

Product Overview

Automated Control Solutions

The 24-hour programmable timer switch (model TH-196) provides precise automated control for electrical devices, enabling efficient energy management. Users can easily customize schedules through a 30-minute interval tab system on a 24-hour rotating dial. Designed for reliability, the unit includes a manual override switch for flexible operation in both residential and commercial settings.

Technical Specifications

Cycle Type	24-Hour
Programming Interval	30 min
Manual Override Capability	Yes
Housing Type	Clear Plastic, Protective, Visibility

Applications

Suitable Applications

- Lighting control
- Heating systems
- Electrical appliance management
