

24-Speed Bicycle Chain

This 24-speed bicycle chain ensures smooth and reliable gear shifting. It is constructed with durable materials for an extended lifespan and resistance to wear.

Overview

High-Performance 24-Speed Drivetrain Solution

The FG51 model is a high-performance bicycle chain specifically engineered for 24-speed drivetrain systems. It is constructed with durable materials to ensure an extended lifespan and high resistance to wear under various cycling conditions. This precision-engineered component provides optimal power transfer and smooth, reliable gear shifting for professional applications.

Technical Details

Model Number	FG51
Component Markings	FG, 51, N46, M09, 58

Construction & Durability

Key Features

- Wear-resistant material construction
- Precision-engineered for 24-speed systems
- Enhanced power transfer efficiency
- Smooth shifting performance

Durability

Extended Lifespan • Wear Resistant • High Performance

Application

Operating Conditions	Suitable for various cycling conditions and environments.
