

# 240L Thermosyphon Solar Water Heater

This solar water heater utilizes a thermosyphon system for efficient water heating. It is designed for residential use and holds up to 240L of water.

## Overview

### Sustainable Hot Water Solution

The 240L Thermosyphon Solar Water Heater provides a highly efficient and environmentally friendly method for domestic hot water production. Utilizing natural circulation principles, this system harnesses solar thermal energy to reliably heat water without relying on complex pumps or electrical components. It is an ideal installation for residential properties seeking long-term energy savings and reduced operational costs.

## Technical Specifications

### Tank Capacity

**240 L**

Capacity

### System Architecture

Thermosyphon

## Certifications and Standards

### Quality Standards

Solar Energy Compliant, Residential Grade
