

240V Surge Protection Device

The surge protection device (SPD) is designed to protect electrical systems and equipment from transient overvoltages. This compact and robust SPD offers reliable protection against voltage spikes, diverting excess energy away from sensitive electronic components.

Overview

Reliable Surge Protection

The KND1 surge protection device is engineered to safeguard electrical systems and sensitive equipment against transient overvoltages, including those caused by lightning strikes and power surges. Featuring a robust and compact design, it effectively diverts excess energy away from critical components to ensure continuous operation. Its modular construction facilitates straightforward installation and maintenance, making it a versatile solution for both residential and commercial electrical infrastructures.

Technical Specifications

Key Features

- Modular design for easy maintenance
- Compact and robust construction
- Transient overvoltage protection
- Lightning strike protection

Rated Voltage	240 V
Model	KND1
Suitable Applications	Residential, Commercial
