

24V Brushless DC Motor with Integrated Control

This brushless DC motor is engineered for high performance in precision applications. It features integrated control circuitry, a compact design, and efficient power utilization.

Product Overview

High-Performance Brushless DC Motor

This 24V brushless DC motor is engineered for precision applications, featuring integrated control circuitry for seamless operation. Its compact design and efficient power utilization make it an ideal component for electronic devices requiring reliable, controlled rotational movement. Specifically optimized for long-life performance, it is a perfect fit for demanding applications such as massage guns.

Technical Specifications

Operating Voltage	24 V
Motor Technology	Brushless DC (BLDC)
Model Identifier	5520-001A

Key Features

Key Benefits	Integrated Control, Long Life, Compact Design, Efficient Power
--------------	--

Applications

Primary Applications

- Massage Guns
- Precision Electronic Devices
