

2500 KN Hydraulic Coil Press

This heavy-duty coil press is designed for transformer coil manufacturing. It features a rotating platform for easy coil positioning, along with a hydraulic power unit and control panel for automated operation.

Overview

Heavy-Duty Transformer Coil Press

This 2500 KN hydraulic coil press is engineered specifically for the demanding requirements of transformer coil manufacturing. It features a robust, heavy-duty frame equipped with multiple hydraulic cylinders to ensure uniform pressure application across the entire coil surface. Designed for precision and control, the system includes an integrated rotating platform to facilitate easy positioning and handling of large, heavy transformer coils.

Technical Specifications

Pressing Force

2500 KN

Nominal Force

Primary Application

Transformer Manufacturing, Coil Pressing

Features

Key Features

- Multiple hydraulic cylinders for uniform pressure
- Integrated rotating platform for coil handling
- Automated hydraulic power unit
- Centralized control panel for monitoring
- Heavy-duty robust frame construction

Automation

Automated Operation • Process Monitoring
