

260A Inverter ARC Welding Machine

This is an inverter ARC welding machine with a 260A maximum output. It utilizes advanced inverter technology for stable and efficient arc performance.

Product Overview

Professional Inverter ARC Welding Machine

This high-performance inverter arc welding machine is engineered for versatility, serving both professional industrial needs and demanding DIY projects. Utilizing advanced inverter technology, it delivers stable, reliable arc performance while maintaining high energy efficiency. Its compact, lightweight design ensures portability, while the integrated digital display allows for precise parameter control for optimal welding results.

Technical Specifications

Maximum Output Current

400 A

Rated Current

Compatible Materials

Steel, Stainless Steel, Cast Iron

Safety & Features

Safety Features

- Over-voltage protection
- Over-current protection
- Over-temperature protection

Included Accessories

Standard Package Contents

- Welding cable
- Electrode holder
- Earth clamp
- Welding mask
