

# 2800HP Oilfield Fracturing Unit

The 2800HP oilfield fracturing unit is designed for high-pressure hydraulic fracturing operations. It features a robust pumping system and advanced control mechanisms for efficient and reliable performance.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Fracturing Unit

This 2800HP oilfield fracturing unit is engineered for high-pressure hydraulic fracturing operations in demanding oil and gas environments. It features a robust pumping system and advanced control mechanisms to ensure efficient fluid delivery and pressure management. Designed for large-scale projects, the unit combines durable construction with high-capacity capabilities to enhance fracturing effectiveness and overall production rates.

## Technical Specifications

### Power Rating

**2800 HP**  
Engine Power

### Chassis Details

SITRAK

### Pump System

KH Plunger Pump

## Compliance & Standards

### Certifications

API, HSE, ISO 9001:2008

## Operational Features

### Operational Highlights

- Simple linear structure for easy installation and maintenance
- High-pressure double crank control for die opening and closing
- Advanced pneumatic and electric components
- High automation and intellectualization
- Pollution-free operation
