

28V 55A Automotive Generator

This 28V 55A generator is designed for automotive electrical systems. It features a robust construction and provides stable voltage output through its rectifier and regulator.

Product Overview

High-Performance Automotive Generator

This 28V 55A automotive generator is engineered for reliability and consistent performance in demanding electrical systems. Featuring a robust metallic housing, it is designed to withstand the rigors of automotive environments. The unit includes integrated electrical components, such as a rectifier and regulator, to ensure stable voltage output for your vehicle's power needs.

Technical Specifications

Rated Voltage

28 V
