

2x220KVA MFDC Automatic Bracket Welder

The 2x220KVA MFDC Automatic Bracket Welder is designed for efficient and precise welding of brackets. It features a Medium Frequency Direct Current (MFDC) power supply and advanced control systems for parameter adjustment and monitoring.

Overview

Precision Welding for Compressor Brackets

The 2x220KVA MFDC Automatic Welder is a specialized industrial solution engineered specifically for high-efficiency bracket manufacturing in the compressor industry. Utilizing Medium Frequency Direct Current (MFDC) technology, this system delivers precise, consistent weld quality through advanced automation and control systems. Its robust design ensures reliable performance and durability, making it an ideal choice for demanding production environments requiring high output and strict quality standards.

Technical Specifications

Rated Capacity

440 KVA

Total Rated Capacity

Max Primary Current	225 A
Max Short Circuit Current	30 KA
Max Working Pressure	11.8 KN
Power Supply	380V / 3/ / 50Hz

Physical Dimensions

Dimensions (L x W x H)	2260 x 2190 x 2070 mm
------------------------	-----------------------

Features

Key Features

- MFDC (Medium Frequency Direct Current) technology
- Automatic operation for consistent weld quality
- Advanced control systems for parameter monitoring
- Optimized for compressor industry bracket manufacturing
- Robust construction for industrial environments
