Overview

Integrated Juice Bottling Solution

This rotary 3-in-1 hot juice filling and processing line is designed for high-efficiency beverage production. The system integrates rinsing, filling, and capping into a single automated rotary platform, ensuring hygienic handling and consistent product quality. It is highly customizable to match specific production capacities, liquid types, and bottle requirements for optimal facility performance.

Technical Specifications

Machine Capacity

24 pcs

Filling Stations

8 pcs

Capping Stations

Model

RCGF 24-24-8

Filling Method

Gravity filling

Compatibility

Compatible Containers

Plastic bottles, Glass bottles, Aluminum cans

Reference Capacity

7000-8000 bottles per hour (for 350ml)

System Components

System Includes

- Water treatment system
- Juice processing line
- Juice filling machine
- Bottled juice packing machine
- Optional: PET bottle blow molding machine
