

30-Ton Capacity Welding Rotator

Heavy-duty welding rotator designed for rotating cylindrical workpieces during welding operations. It features robust construction with a 30-ton capacity and adjustable rollers.

Overview

Industrial Welding Performance

This heavy-duty 30-ton capacity welding rotator is engineered for the seamless rotation of cylindrical workpieces during critical welding operations. Designed for high-demand industrial environments, it features robust construction to ensure stability and precision. The unit includes adjustable rollers to accommodate a range of diameters, along with an intuitive control panel for exact speed management.

Performance Specifications

Load Capacity

30 Ton

Weight Capacity

Key Features

- Robust industrial-grade construction
- Adjustable rollers for versatile workpiece diameter compatibility
- Integrated control panel for precise speed control
- Optimized for high-efficiency welding workflows

Compliance & Application

Primary Applications

Industrial Welding, Cylindrical Workpiece Fabrication, Heavy Engineering
