

300lb CF8 Stainless Steel Globe Valve

This globe valve is designed for throttling and regulating flow in pipelines. Constructed from CF8 stainless steel, it is suitable for corrosive environments and acid applications.

Overview

Industrial Flow Control Solution

This industrial globe valve is engineered for precise throttling and regulation of flow within demanding pipeline systems. Constructed from high-grade CF8 stainless steel, it offers exceptional resistance to corrosive environments, ensuring long-term reliability. With a 300lb pressure rating compliant with API standards, this valve is an ideal choice for critical applications requiring both accurate flow control and secure shutoff capabilities.
