

316L Stainless Steel Reducing Tee Fitting

This tee fitting is made from 316L stainless steel. It is a reducing tee, meaning one branch has a smaller diameter than the other two.

Product Overview

316L Stainless Steel Reducing Tee

The 316L Stainless Steel Reducing Tee is a high-performance pipe fitting designed for fluid conveyance systems requiring robust corrosion resistance. Constructed from low-carbon 316L grade steel, this component ensures excellent weldability and structural integrity in demanding industrial environments. Its reducing design allows for seamless branch transitions between different pipe diameters.

Technical Specifications

Stamped Markings

- 22401
- 1 1/2 10S
- WP 316 L

Material Grade	316L Stainless Steel
Fitting Type	Reducing Tee
Size Specification	1.5 inch
Schedule	10S
Key Properties	Low Carbon, Corrosion Resistant, Weldable
