

3/8 Inch Injection Packer for Concrete Repair

This 3/8 inch injection packer facilitates the injection of epoxy or polyurethane resins into cracks. It is constructed from durable materials like steel with rubber sleeves for a tight seal.

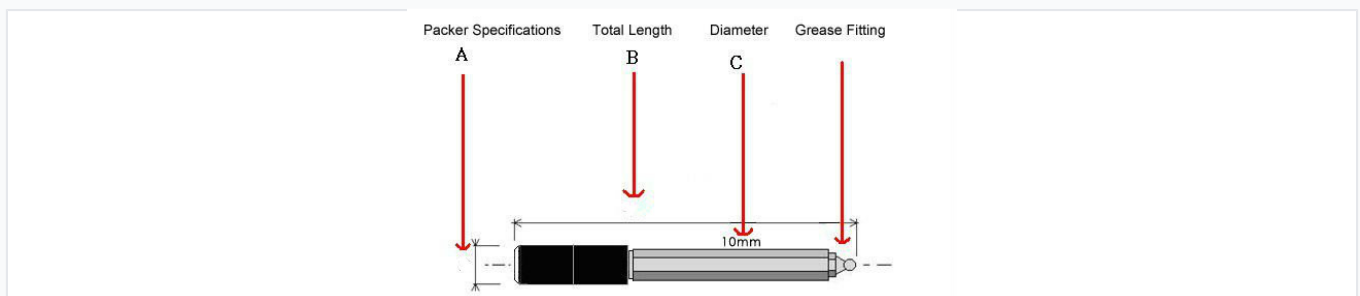

Product Overview

Professional Concrete Repair Injection Packers

These 3/8 inch injection packers are essential tools designed for high-performance concrete crack repair and waterproofing applications. Engineered with durable metal components and high-quality rubber sleeves, they ensure a secure, leak-proof seal for the injection of epoxy or polyurethane resins. With a wide range of available lengths, these packers offer versatility for various concrete thicknesses and structural repair requirements.

Technical Specifications

Detailed view of the mechanical injection packer featuring a grease fitting and 10mm diameter design.

Available Lengths

- 80
- 90
- 92
- 100
- 140
- 150
- 200
- 400
- 800

Diameter	10 mm
Head Dimension	13 mm
Key Features	One-way valve, Grease fitting, Rubber sleeve seal, Steel construction

Application

Injection packers in action, demonstrating suitability for waterproof concrete repair and crack sealing.

Suitable Applications

Concrete Crack Repair • Waterproof Injection • Structural Integrity • Building Material Machinery
