

3D Holographic LED Display for Advertising

This hologram advertising machine uses LED lighting to create 3D holographic displays. It is designed for commercial advertising, projecting high-resolution visuals that attract attention and enhance brand visibility.

Product Overview

Innovative 3D Holographic Technology

This holographic advertising machine utilizes the principle of human visual persistence combined with ultra-high density LED light bands. By integrating wireless power supply technology, it creates the illusion of images suspended in mid-air for a captivating 3D effect. Designed for versatility, it offers a distinct advantage over traditional 2D displays through its naked-eye 3D visual impact and ease of content management.

Key Features

Operational Advantages

- Convenient installation
- Flexible content replacement
- Multiple unit combination support
- Energy-efficient design

Visual Capabilities

Naked-eye 3D, Air suspension effect, High-density LED, High brightness

Applications

Typical Use Cases

Conference activities • Office buildings • Hotels • Shopping malls • Brand display
