

4-Cylinder 41hp Diesel Engine

This 4-cylinder diesel engine produces approximately 41 horsepower. It is designed for applications such as generators, pumps, and small machinery.

Overview

Reliable 4-Cylinder Power Solution

This 4-cylinder diesel engine is engineered to deliver a robust 41 horsepower, making it an ideal candidate for diverse industrial applications including generators, water pumps, and small machinery. The unit features a naturally aspirated design and comes equipped with an integrated cooling system, including a radiator and fan, to ensure consistent thermal performance under load. Mounted on a durable support frame, this engine is designed for straightforward installation and dependable, long-term operation.

Performance Metrics

Power Output

41 hp

Horsepower

Technical Specifications

Cylinder Configuration	4
Aspiration	Naturally Aspirated

System Components

Fuel System

- Mechanical fuel pump
- Fuel injectors

Cooling System	Radiator, Cooling Fan
Lubrication System	Full-flow lubrication with oil filter

Design & Build

Finish Color

Green

Mounting	Integrated support frame
