

4-Inch Submersible Solar Water Pump for Deep Wells

This 4-inch submersible solar pump is designed for deep well applications. Constructed with stainless steel, it provides efficient water pumping powered by solar energy and is suitable for irrigation and livestock watering.

General Overview

High-Efficiency Solar Submersible Pump

This 4-inch submersible solar water pump is engineered for efficient water extraction from deep wells in remote or off-grid locations. Crafted from high-quality stainless steel, the unit provides superior corrosion resistance and long-term durability. It serves as a reliable solution for agricultural irrigation, livestock water management, and domestic supply systems.

Technical Specifications

Pump Diameter	4 inch
Construction Material	Stainless Steel

Applications

Primary Applications	Irrigation, Livestock Watering, Domestic Water Supply, Deep Well Pumping
----------------------	--

Features

Key Features

- Solar-powered energy efficiency
- Corrosion-resistant stainless steel body
- Designed for 4-inch deep well boreholes
- Reliable performance for off-grid environments
