

40-Ton Axle Load Rail Wagon for Australian Railways

This heavy-duty wagon is designed for the Australian railway network and can handle a 40-ton axle load. It is built for transporting bulk materials and features a robust construction for reliable performance.

Overview

Heavy-Duty Rail Transport Solution

This 40-ton axle load wagon is specifically engineered for the demanding requirements of the Australian railway network. Designed for the efficient transport of bulk materials, it features a robust construction with reinforced side panels and a corrosion-resistant finish to withstand harsh operational environments. The wagon integrates heavy-duty wheels and suspension systems, ensuring reliable performance and safety while meeting strict Australian railway standards.

Technical Specifications

Axle Load Capacity	40 ton
Tare Weight	2002 kg
Load Limit Reference	2238

Key Features

Construction Features

- Reinforced side panels
- Secure locking mechanism
- Corrosion-resistant finish
- Heavy-duty suspension system

Compliance

Regulatory Standards	Australian Railway Standards, Heavy-Duty Compliant
